US 10Y Yield RATES YIELDS	5.5	5.4	5.2	Monthly	%	Jan 2025 (2)	BLS	VERIFIED

MACRO INDICATOR CADENCE GUIDE & PREVIOUS / FORECAST / ACTUAL INTERPRETATION:

- Monthly Data Required: High-velocity indicators like Non-Farm Payrolls (NFP), Consumer Price Index (CPI), PPI, and Retail Sales need monthly series to track short-term inflation and employment.
- Weekly Data Required: High-frequency data such as Initial Jobless Claims and Energy Inventories provide early turning-point signals before monthly summaries appear.
- Quarterly Data (3rd Month / 6th Month Revision Data): GDP and Current Account balance are reported quarterly with 1st estimate (Advance), 2nd estimate (2nd month), and final revision (3rd month).
- Annual Data: Structural metrics like fiscal debt-to-GDP and annual benchmark revisions anchor long-term sovereign solvency.
- Economic Surprise Dynamics: Previous = Prior period baseline; Forecast = Consensus expectation; Actual = Official print. When Actual exceeds Forecast (Positive Surprise), institutional capital flows shift.
- Prime Pip FX verifies all macroeconomic inputs against official statistical desks with zero automated distortion.

DATA INTEGRITY GUARANTEE:

Prime Pip FX strictly maintains authentic economic indicator fields: missing values are never substituted with zero, forecasts are never treated as actuals, and units retain their authentic economic meaning for institutional trading decisions.
